AMAXA NUCLEOFECTOR® II

<p>Description</p>	<p>Equipment that enables transfer of a molecule directly into the cell nucleus allowing the transfection of cells by the creation of small pores due to the application of an electrical pulse.</p>
<p>Indications</p>	<p>For primary cells of the nervous system and cell lines of difficult transfection.</p>
<p>Features</p>	<ul style="list-style-type: none"> • High efficiency of transfection • More than 90 transfection protocols available • Efficient transfection of non-dividing primary neural cells • Allows the entry of DNA or RNA in the cytoplasm and nucleus of cells with a non-viral method.
