

Neural Culture Technical Laboratory

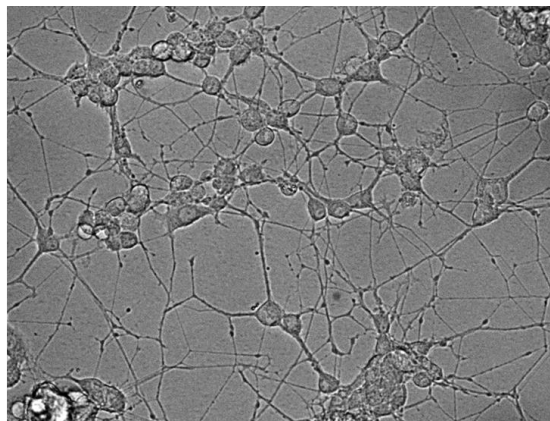

Techniques offered in Cell Lines

- Defrost, maintenance cryopreservation of adherent or suspension cells and storage in liquid N₂.
- [Supply of cell lines.](#)
- PCR analysis for detection of mycoplasma and decontamination if it is necessary.
- Plating cells at given density seeding.
- Co-culture models of cell lines
- Cell differentiation of several lines: PC12, P19, SH-SY5Y, N1E-115, NG-108-15, etc.
- Generation and titration of viral vectors

The offer can be expanded in response to the specific needs of any research group.

Control PC12

Differentiated PC12

The facilities are accredited by the el Ministerio de Agricultura, Pesca y Alimentación to work with Genetically Modified Organisms within the level of biosafety 2
